

The Best Kidney Stone Procedure for Me

Ureteroscopy (URS)

A **small telescope/camera** is inserted into the bladder and urinary tract to look at the stone. Your urologist then breaks and/or removes your stone with a laser.

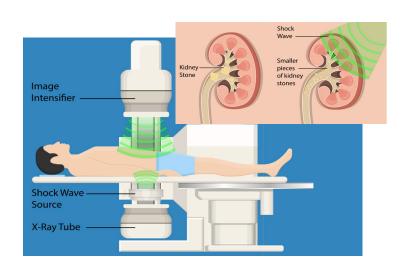

Some pieces may pass in the urine over time as well.

Urethra—Ureter Source Kidney Source Kidney Stone Monitor

Shockwave Lithotripsy (SWL)

A machine makes **sound waves** that break up stones into smaller pieces from outside the body. Pieces of stone are then passed in the urine over time.

SWL can treat most kidney stones, but sometimes it is not recommended.

	Treatment Differences				
	URS	SWL			
Best Used for:	Stones in the ureter, multiple stones, larger stones and harder stones	Stones in the kidney and upper ureter, only 1 stone and softer stones			
Effectiveness	More effective: Higher chance of being stone free (no stones left)	Less effective: Lower chance of being stone free (no stones left)			
Number of Procedures	Only one procedure usually required	Can require other procedures			
Risk of Complications	Both URS and SWL have low overall risk of complications				
	Low risk	Lowest risk			
Pain	Patients describe both URS	JRS and SWL as somewhat painful			
	Higher chance of needing a stent making it more painful	Associated with the least amount of pain according to patients			
Recovery Time	Both URS and SWL require time to recover, this varies by patient				
at Home	Generally, recovery is longer (3 to 5 days)	Generally, recovery is shorter (1 to 3 days)			

Recovery Time

after the procedure

- The amount of time you need to recover

The Best Kidney Stone Procedure for Me

Your Treatment Goals Please indicate (check \checkmark) how important the following treatment goals are to you **No Preference Not Important Important Effectiveness** - The chance that all of your stone will be removed **Number of Procedures** - The chance that your treament will be sucessful with only one procedure **Risk of Complications** - The chance that you will experience a complication **Pain** - The amount of pain associated with the procedure and your recovery
