

Goal Directed Approach for Imaging after Uteroscopy

Assessment Goal	Recommended Approach
Post-operative Hydronephrosis	*Order Renal Ultrasound; Consider point-of-care
Stone-Free	Order KUB; Strongly Recommend Low-dose CT
Post-operative Hydronephrosis <u>and</u> Stone-Free	Order Low-dose CT

* Ultrasound is not reliable for assessment of residual stones

In low-risk patients,
(no pre-op hydro, ureteral stone; no pre-op hydro, renal stone $\leq 10\text{mm}$)
post-op imaging may not be necessary
