

Managing Pain and Urinary Symptoms following Ureteroscopy

- You had surgery to remove or fragment your kidney stones, also known as an ureteroscopy.
- After surgery, you may have some degree of pain or discomfort.
- In most patients, these symptoms can be managed with medications.

Common symptoms after kidney stone surgery

Pain in the bladder, lower abdomen, and/or lower back

Urinary frequency, and/or urgency

Burning with urination

Blood in the urine

Sensation of incomplete emptying of the bladder

The following recommended medications may be provided by your doctor to reduce symptoms following your kidney stone surgery

Non-Steroidal Anti-Inflammatory Drugs (NSAIDs)

 Best at managing flank and abdominal pain related to kidney stones by reducing inflammation

Examples: Toradol, Ibuprofen (Motrin), Naproxen

(Aleve), Diclofenac

Acetaminophen*

- Manages flank and abdominal pain after surgery by blocking pain signals
- Very effective when combined with NSAIDs

Alpha Blockers

- Helps with flank pain, abdominal pain, and urinary symptoms after surgery by relaxing bladder and ureter muscles
- Helps relieve stent discomfort
- May assist kidney stone fragment passage

Examples: Tamsulosin (Flomax)

Anticholinergics

- Prevents bladder spasms and bladder pain by preventing involuntary muscle movements
- Helps relieve stent discomfort

Examples: Oxybutynin (Ditropan) and Tolterodine (Detrol)

You may also be prescribed the following optional medications to help reduce your symptoms

Opioids**, ***

- Manages flank and abdominal pain after surgery by blocking some pain receptors
- Can cause nausea, vomiting, constipation

Pyridium

- Helps with painful urination by interacting with the bladder surface to provide pain relief
- May turn urine orange

Examples: Norco, Vicodin, Oxycodone

^{*}Do not take more than 3000 mg of acetaminophen in a 24 hour period

^{**}Shorter duration (less than 3 days) is recommended to prevent dependence

^{***}Most patients are able to manage symptoms without these drugs

Managing Pain and Urinary Symptoms following Ureteroscopy

When to call your doctor

Chills, fever higher than 101.5°F

Difficulty or inability to urinate

Nausea, vomiting and unable to drink or keep down liquids

Constantly leaking urine

Severe pain that is not relieved by pain medication

The stent falls out
